

ATE Test Program Development

Services Included:

- Prior to Start of Project
 - A kickoff meeting/conference call will be held to ensure good flow of information between the customer and WML engineers
 - A detailed project schedule will be provided outlining work to be done with milestones and dates
- Test Program Development
 - Customer provides product samples, device specification, list of tests to be performed, test patterns for each functional test and the desired test conditions in production
 - A production-ready test solution is then fully developed which includes load boards and test programs targeted for the selected production test platform.
- Final Summary
 - A wrap-up meeting will be held to share all results from the project and to ensure the test solution meets the expectation of the customer

Deliverables:

- Hardware: Load board(s), schematics, bill of materials, layout files
- Software: Test program(s) for the specified test platform
- Detailed test plan showing test flow, voltages, limits, test methods, functional tests, DC parametrics, AC tests, etc.
